 Top 10 Environmental Justice Scoring Depots

 **rudin center**
 for transportation policy & management

10 depots do not have ceiling height condition info because very little bus parking is indoors

Only 6 depots have electrical equipment that is ready for the transition, the rest could see cost savings from synchronizing solar installation with bus depot upgrades

At 8 depots, space is limited and some buses will be charged outdoors (no ceiling info). These depots are strong candidates for parking lot solar canopies that can relocate charging outside cramped depot interiors
